

**UTC Aerospace Systems**

# Theoretical Aspects of Prognostics

**Panel Session Chair: Dr. Chetan Kulkarni**  
SGT/NASA Ames Research Center

## Panelists

**Dr. Marcos Orchard**  
University of Chile

**Dr. Gautam Biswas**  
Vanderbilt University

**Dr. Bin Zhang**  
University of Southern Carolina

**Dr. Matteo Corebbeta**  
SGT/NASA Ames Research Center

- In majority of the Prognostic and Health Management applications particle filtering-based algorithms are being implemented as the state-of-the-art.
- PF-based prognosis frameworks have demonstrated their drawbacks when trying to estimate the probability of failure in nonlinear, non-Gaussian systems performing uncertain operating profiles.
- To overcome this issue, it is first necessary to establish adequate performance metrics for the framework which has been discussed and presented in recent years.
- It has been observed that not much work has been done on standardizing prognostics definitions as they suffer from ambiguous and inconsistent interpretations.
- The aim of the session is to bring together experts in the area to discuss about the lack of standards due to varied end-user requirements
- Varying application domains, including aerospace, automotive, nuclear power, electrical etc.
